The book that you hold in your hands is the second in a series. The two titles in the series are the following:

Genetic Influences on Human Fertility and Sexuality: Theoretical and Empirical Contributions from the Biological and Behavior Sciences Edited by Joseph Lee Rodgers, David C. Rowe, & Warren B. Miller

Published by Kluwer Academic Press, 2000 The Biodemography of Human Reproduction and Fertility

Edited by Joseph Lee Rodgers & Hans-Peter Kohler Published by Kluwer Academic Press, 2002 The series

has published chapters by researchers who study human fertility, from a particular perspective:

Biodemography. We welcome your interest and participation in this developing subfield. Or, perhaps,

biodemography may be better referred to as a "superfield. " Because biodemography so naturally crosses

interdisciplinary boundaries, and because its application draws together researchers from disparate

disciplines, it may well be more appropriate to consider that biodemography subsumes a number of other

disciplines, rather than the other way around. In this preface, we will describe our own efforts and those of

many others to promote and develop the study of human fertility, using methods, models, and theories from

both biological and demographic domains. In December, 1997, 25 participants from three different countries

gathered in Tucson, Arizona for a small conference with the title "Genetic Influences on Fertility-Related

Processes. " That conference represented a fascinating blending of research from two apparently separate

domains.
