Image Processing using Pulse-Coupled Neural Networks: Applications in Python (Biological and Medical Physics, Biomedical Engineering) Thomas Lindblad, Jason Kinser

Image processing algorithms based on the mammalian visual cortex are powerful tools for extraction information and manipulating images. This book reviews the neural theory and translates them into digital models. Applications are given in areas of image recognition, foveation, image fusion and information extraction.

The third edition reflects renewed international interest in pulse image processing with updated sections presenting several newly developed applications. This edition also introduces a suite of Python scripts that assist readers in replicating results presented in the text and to further develop their own applications.

From reader reviews:

Nakia Schultz:

In this 21st centuries, people become competitive in most way. By being competitive currently, people have do something to make all of them survives, being in the middle of often the crowded place and notice by surrounding. One thing that sometimes many people have underestimated this for a while is reading. Yes, by reading a book your ability to survive improve then having chance to remain than other is high. For you who want to start reading a book, we give you this Image Processing using Pulse-Coupled Neural Networks: Applications in Python (Biological and Medical Physics, Biomedical Engineering) book as starter and daily reading guide. Why, because this book is greater than just a book.

Donald Jefferies:

People live in this new moment of lifestyle always make an effort to and must have the free time or they will get great deal of stress from both daily life and work. So , once we ask do people have extra time, we will say absolutely indeed. People is human not just a robot. Then we consult again, what kind of activity do you possess when the spare time coming to you actually of course your answer can unlimited right. Then ever try this one, reading publications. It can be your alternative with spending your spare time, typically the book you have read will be Image Processing using Pulse-Coupled Neural Networks: Applications in Python (Biological and Medical Physics, Biomedical Engineering).

Kim Deyoung:

Playing with family inside a park, coming to see the water world or hanging out with pals is thing that usually you might have done when you have spare time, in that case why you don't try issue that really opposite from that. Just one activity that make you not feeling tired but still relaxing, trilling like on roller coaster you are ride on and with addition details. Even you love Image Processing using Pulse-Coupled Neural Networks: Applications in Python (Biological and Medical Physics, Biomedical Engineering), you may enjoy both. It is great combination right, you still wish to miss it? What kind of hangout type is it? Oh can occur its mind hangout people. What? Still don't have it, oh come on its referred to as reading friends.

Richard Hund:

Don't be worry if you are afraid that this book will filled the space in your house, you might have it in e-book means, more simple and reachable. This specific Image Processing using Pulse-Coupled Neural Networks: Applications in Python (Biological and Medical Physics, Biomedical Engineering) can give you a lot of pals because by you looking at this one book you have point that they don't and make a person more like an interesting person. This book can be one of one step for you to get success. This reserve offer you information that probably your friend doesn't learn, by knowing more than other make you to be great men and women. So , why hesitate? We need to have Image Processing using Pulse-Coupled Neural Networks:

Applications in Python (Biological and Medical Physics, Biomedical Engineering).
